

Algorithm for file updates in Python

Project description

Create an algorithm to open, read, write, split and join a text file

Open the file that contains the allow list

```
with open(import_file, "r") as file:
```

Read the file contents

```
ip_addresses = file.read()
```

Convert the string into a list

```
ip_addresses = ip_addresses.split()
```

Iterate through the remove list

```
for element in ip_addresses:
```

Remove IP addresses that are on the remove list

```
if element in remove_list:
```

Update the file with the revised list of IP addresses

```
ip_addresses = " ".join(ip_addresses)
```

Summary

Parsing a file allows security analysts to read and update the contents. Python helps analysts develop algorithms to automate the process of parsing files and keeping them up-to-date.
