

Apply filters to SQL queries

Project description

Examine the organization's data in their employees and login attempts tables. Using SQL filters to retrieve records from different datasets and investigate the potential security issues.

Retrieve after hours failed login attempts

```
SELECT *  
FROM log_in_attempts  
WHERE login_time 'X' > AND success = 'Y';
```

When replacing 'X' with '18:00' and 'Y' with 1 revealed the amount of log in attempts that occurred after work hours.

Retrieve login attempts on specific dates

```
SELECT *  
FROM log_in_attempts  
WHERE login_date = 'X' OR login_date = 'Y';
```

Filtered between either dates to reveal how many log in attempts occurred within a specific time frame.

Retrieve login attempts outside of Mexico

```
SELECT *  
FROM log_in_attempts  
WHERE NOT country LIKE 'MEX%';
```

Shows the amount of log in attempts that took place outside of Mexico.

Retrieve employees in Marketing

```
SELECT *  
FROM employees  
WHERE department = 'Marketing'
```

Reveals data on employees in the Marketing department.

Retrieve employees in Finance or Sales

```
SELECT *  
FROM employees  
WHERE department = 'Finance' OR department = 'Sales';
```

The OR option retrieves employees either in Finance and Sales department

Retrieve all employees not in IT

```
SELECT *  
FROM employees  
WHERE NOT department = 'Information Technology';
```

The NOT option retrieves all employees who are not part of the Information Technology department.

Summary

SQL filters revealed the amount of log in attempts before and after work hours. Also, which employees attempted to access data as well as the location this occurred in.
